

LockDown Browser prevents students from printing, copying, going to different URLs or accessing other applications during an online exam. It's ideal for use in testing centers and proctored environments.

Respondus Monitor enhances LockDown Browser by using a student's webcam to record the assessment session. This enables online exams to be taken in non-proctored environments and deters students from accessing other resources during an exam (such as a phone, a second computer, etc.). It also ensures the right student is taking the exam, and that the student isn't getting help from others.

You may find the following resources helpful in getting started:
